Daniel Bello

Full Stack Developer

Professional summary

Adegoke Adeyinka Daniel Bello, a full-stack and mobile developer with over 5 years of professional expertise, adept in front and back-end technologies including NodeJS, ReactJS, ASP.NET-CORE, etc. Having advanced skills with MongoDB, Postgres, and SQLite. Demonstrated ability to enhance system efficiencies, notably in creating systems quickly and efficiently. Committed to leveraging modular architecture and comprehensive database design to deliver robust, user-centric software solutions.

Education

B.Eng Computer Engineering

Graduated with honors, receiving prize for best final project on Novel Voting Software Design.

Courses

Node.js & MongoDB: Developing Backend Database Applications

I.B.M — Dec 2024 - Jan 2025

Introduction To Swift Programming

University of Toronto — Dec 2024 - Feb 2025

iOS App Development Basics

University of Toronto — Dec 2024 - Feb 2025

JavaScript Programming Essentials

I.B.M — Apr 2025

App Design and Development for iOS

University Of Toronto — May 2025 - Jul 2025

Employment history

Full Stack Developer

Freelance, Indianapolis, USA — Jan 2024 - Present

- Facilitated client consultations to gather requirements, ensuring project alignment and fostering strong relationships for future collaborations.
- Executed targeted marketing strategies, enhancing brand visibility and contributing to measurable improvements in client engagement.
- Developed customized solutions for diverse client needs, streamlining processes and driving substantial improvements in operational efficiency.

Full Stack Developer

Defence Space Administration — Apr 2021 - Oct 2023

- Engineered secure messaging platform for Defence Space Administration
- Implemented end-to-end encryption system
- Increased document security through local server setup
- Enhanced document security by developing a local NodeJS server with MongoDB.
- Pioneered a predictive maintenance tool for network servers.

Full-Stack Developer

Gallery of Code, Remote — Jan 2023 - Apr 2024

- Transitioned backend servers for two projects, ensuring zero data loss
- Contributed to team success in a collaborative environment
- Introduced modular architecture for efficient code updates
- Engineered a custom caching solution, enhancing system efficiency by 25%.
